Objective

Results-driven Software Engineering student (Expected 2027) with hands-on internship experience in ReactJS, REST API integration, component-based architecture, and responsive web development. Experienced in applying practical skills across software development, AI/ML, and cybersecurity through projects, research, and laboratory work. Seeking opportunities to leverage strong academic foundations and hands-on technical skills to build reliable, scalable, and secure solutions in a dynamic technical environment.

Education

YBN University <i>Bachelor of Technology in Software Engineering</i> CGPA: 8.14	Ranchi, Jharkhand, India 2023–2027
D.A.V. Public School <i>Higher Secondary Education</i> Percentage: 63%	Gumla, Jharkhand, India 2021–2023
D.A.V. Public School <i>Secondary School</i> Percentage: 75%	Gumla, Jharkhand, India 2019–2021

Technical Skills

Proficient In: JavaScript, ReactJS, HTML5, CSS3, Python, C, C++, SQL, Node.js, Express.js, MongoDB, MySQL, Git, GitHub, REST APIs, Material-UI (MUI), Tailwind CSS, React Router, Figma, React Native

Prior Experience: Redux, Redux-Saga, PostgreSQL, Microsoft SQL Server, Docker, Jenkins, Pandas, NumPy, Scikit-learn, Machine Learning, Data Preprocessing, Model Evaluation, Linux, Kali Linux, Wireshark, Nmap, Socket.IO

Familiar With: Java, TensorFlow, PyTorch, Natural Language Processing (NLP), Kubernetes, AWS, Microsoft Azure, Google Cloud Platform, Oracle SQL, Swagger

Computer Science: Object-Oriented Programming, Data Structures and Algorithms, Operating Systems, Computer Networks, Linux/UNIX

Development Tools: VS Code, IntelliJ IDEA, Postman, Anaconda

Experience

Eimples Lab <i>Software Engineer Intern</i>	Remote June 2024–Present
○ Developed responsive Organisation Panel interfaces using ReactJS and Material-UI (MUI). ○ Built reusable, component-based React architecture to improve maintainability and development efficiency. ○ Integrated REST APIs and implemented application navigation using React Router and BrowserRouter. ○ Used Redux-Saga for asynchronous API operations and state management. ○ Debugged and optimized React components to improve application responsiveness and maintainability. ○ Developed responsive layouts for consistent experiences across desktop, tablet, and mobile devices.	
Deployed Work: Jankoti – Live Application	

Projects

Let's Resonate – Location-Based Social Platform

Live Demo

- **Deliverable:** Developed a full-stack location-based social platform supporting user interaction and real-time communication.
- **Frontend:** Built responsive interfaces using ReactJS and integrated REST APIs.
- **Backend:** Developed RESTful APIs using Node.js and Express.js with MongoDB for data persistence.
- **Real-Time:** Implemented real-time communication using Socket.IO.

Health Band – Health & Fitness Tracking Application

- Designed 30+ mobile screens in Figma for a smart wearable health-tracking application.
- Developed reusable, responsive React Native components for iOS and Android.
- Implemented dashboards for heart rate, steps, activity goals, and vital metrics.

Cybersecurity Virtual Lab

- **Deliverable:** Built an isolated cybersecurity laboratory using Windows, Kali Linux, and Ubuntu Server virtual machines.
- **Network Analysis:** Used Nmap for network discovery and Wireshark for packet capture and traffic analysis.
- **Linux Security:** Practiced Linux administration, SSH, permissions, and secure file transfer in a controlled environment.
- **Security Analysis:** Studied attack-chain concepts using the MITRE ATT&CK framework in controlled scenarios.

Research Work: Wheelchair and Exoskeleton Technology

- Conducted technical research on robotic wheelchair and wearable exoskeleton technologies for assistive mobility.
- Studied exoskeleton mechanisms, assistance strategies, and human–robot interaction.
- Investigated challenges related to user adaptation and assistive movement.

Research Work: GPS-Denied UAV Navigation

- Investigated obstacle-detection approaches for UAV navigation in GPS-denied environments.
- Studied computer-vision and sensing approaches for detecting thin obstacles such as wires and fences.
- Analyzed challenges associated with obstacle detection and safe autonomous navigation.

Research Interests

Artificial Intelligence, Machine Learning, Cybersecurity, Software Engineering, Computer Vision, UAV Navigation, Assistive Robotics, Exoskeleton Systems, and Human–Robot Interaction

Extra-Curricular Activities

Active member of the Coding Club at YBN University.
